This is a simple **PHP Project** entitle **Simple Food Website**. This project was developed using **PHP** and **MySQL databases**. This system is a sort of **CMS (Content Management System)** in which the system or company management can provide their clients a simple website to know more about them. This system can be helpful to the IT/CS students or newbies to understand how to create a CMS Web App using PHP Language. The website containing an **About, Innovation**, and **Our Market Contents**. Since this project is a sort of **CMS** type of **web app**, the contents in the website can be managed or modified through the front-end in the admin panel or admin side/module of the project. This project also allows the admin to modify the site settings which are the site name, meta keywords, and meta description that can help your website improve its visibility for relevant searches in search Engines, in short, managing the website's basic information for **(SEO)**.

(https://vidcrunch.com)

The system was developed using **PHP/PDO**, **MySQL Database**, **HTML**, **CSS**, **Javascript**, and **Bootstrap** for the design. The system has a pleasant user interface and user-friendly functionalities.

Features

Website

- **Home Page**
- **About Us Page/Content**
- **Innovation Page/Content**
- **Our Market Page/Content**
- **Pleasant user interface**
- **Contact Us Page**
- **Footer containing system's other info and navigation**

Admin Panel

- **Login Page**
- **Manage Pages Contents**
- **Manage System Information and Details**
- **Manage User Accounts**

How to Run

Requirements

- **Download** and **Install** any **local web server such as XAMPP/WAMP**.
- **Download** the provided source code **zip** file. (*download button is located below.*)

Setup/Installation

1. **Extract** the downloaded source code **zip** file.
2. **Open** your **XAMPP/WAMP's Control Panel** and start the **"Apache"** and **"MySQL"**.
3. If you are using **XAMPP**, **copy** the extracted source code folder and paste it into the XAMPP's **"htdocs"** folder. And if you are using **WAMP**, paste it into the **"www"** folder.
4. **Open** a new tab in your **browser** and browse the **PHPMyAdmin**. i.e. http://localhost/phpmyadmin
5. **Create** a **new database** naming **"food"**.
6. **Import** the provided **SQL** file in your newly created database. The file is known as **"INSTALL ME.sql"** and located inside the **"INSTALLER"** folder.
7. **Open** a new tab in your **browser** and **browse** the **Web Application**. i.e. http://localhost/food for the website and http://localhost/food/admin for the admin side

Admin Credentials

Username: **admin**
Password: **admin**

DEMO

That's it! I hope this **Simple Food Website** a **CMS Project** in **PHP** and **MySQL Database** will help you with what you are looking for and enhance your programming capabilities and knowledge.

Note: Due to the size or complexity of this submission, the author has submitted it as a .zip file to shorten your download time. After downloading it, you will need a program like Winzip to decompress it.

Virus note: All files are scanned once-a-day by SourceCodester.com for viruses, but new viruses come out every day, so no prevention program can catch 100% of them.

FOR YOUR OWN SAFETY, PLEASE:

1. Re-scan downloaded files using your personal virus checker before using it.
2. NEVER, EVER run compiled files (.exe's, .ocx's, .dll's etc.)--only run source code.
