OpenCraft internal ticket : [BB-6630](#)

Testing instructions

- Checkout this branch in `<devstack_parent>/src` directory in your local setup
- log in to Studio shell, switch to `edxapp` virtual env
- Go to `/edx/src/xblock-drag-and-drop-v2` and run `pip install -e .`
- [enable the Drag and Drop XBlock in Studio](#)
- Go to Studio UI and create a new unit
- Select Problem > Advanced > Drag and Drop, to create a v2 drag and drop XBlock
- Click Edit and change mode to Assessment
- Scroll down to Explanation Text like `Test HTML 12m²`
- Add some text in the text area
- Click Continue twice and Save
- Click on View Live Version
- Ensure there is no extra line as shown above
- Do as many attempts as required till "Show Answer" button is active
- Click on Show Answer
- Ensure Explanation is rendered like 'Test HTML 12m²'

Deadline

"None"

feat: Add HTML in explanations within DnDv2

Thanks for the pull request, @abodacs! Please note that it may take us up to several weeks or months to complete a review and merge your PR.

Feel free to add as much of the following information to the ticket as you can:

- supporting documentation
- [Open edX discussion forum threads](#)
- timeline information ("this must be merged by XX date", and why that is)
- partner information ("this is a course on edx.org")
- any other information that can help Product understand the context for the PR

All technical communication about the code itself will be done via the GitHub pull request interface. As a reminder, [our process documentation is here](#).

Please let us know once your PR is ready for our review and all tests are green.

@abodacs 🙌

- ☒ I tested this: Entered HTML in the explanation box and verified that it renders properly in the window
- ☒ I read through the code
- ☒ I checked for accessibility issues
- ☐ Includes documentation - NA

@natabene, would you like to take a look at this before we merge it?

@Agrendalath I personally don't, but maybe @jmbowman wants.

- ☒ I tested this: checked that explanations render HTML correctly; verified Maple and Master compatibility
- ☒ I read through the code
- ☒ I checked for accessibility issues: n/a
- ☒ Includes documentation: n/a
- ☒ I made sure any change in configuration variables is reflected in the corresponding client's configuration-secure repository: n/a

Agrendalath added 3 commits 2 months ago

- Merge branch 'master' into abodacs/explanations-html-support 6d00cfa
- chore: bump version 36f773f
- style: adjust linting ebb4381

Did this change consider implications for cross-site scripting (XSS)? If we're adding HTML support we should ensure that we're not creating an XSS issues. There are some useful docs [here](#).
