TomSweeneyRed... commented on Mar 24, 2020

Collaborator

Stealing @nalind's workaround to avoid refetching content after a file read failure. Under the right circumstances that could be a symlink to a file meant to overwrite a good file with bad data.

Testing:

```
# cat /tmp/dont_overwrite_me.txt
goodstuff

# python3 webserver.py &
[1] 14901

# buildah bud http://localhost:8000
127.0.0.1 - - [24/Mar/2020 20:15:50] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [24/Mar/2020 20:15:50] "GET / HTTP/1.1" 200 -
no FROM statement found

# cat /tmp/dont_overwrite_me.txt
goodstuff
```
