Security Fix for Cross-site Scripting (XSS) - huntr.dev #4543

Closed huntr-helper wants to merge 9 commits into `monicahq:master` from `418sec:2-other-monica`

Conversation 9 Commits 9 Checks 0 Files changed 5

huntr-helper commented on Oct 12, 2020

<https://huntr.dev/users/alromh87> has fixed the Cross-site Scripting (XSS) vulnerability. alromh87 has been awarded \$25 for fixing the vulnerability through the huntr bug bounty program. Think you could fix a vulnerability like this?

Get involved at <https://huntr.dev/>

Q | A

Version Affected | ALL

Bug Fix | YES

Original Pull Request | [418sec#2](#)

Vulnerability README | <https://github.com/418sec/huntr/blob/master/bounties/other/monica/2/README.md>

User Comments:

Metadata *

Bounty URL: <https://www.huntr.dev/bounties/2-other-monica>

Description *

XSS queries being triggered from people info page by the audit log at the settings, fix sanitizes content before showing to user.

Technical Description *

Even though Laravel has inbuilt protection for XSS it has been disabled when presenting log: `{!! $log['description'] !!}` to enable embedding contact links, leading to XSS, htmlentities was used to sanitize data before showing to user, effectively avoiding new as well as already stored XSS.

Edit

Looking further into the code I realized the XSS protection have been disabled in many views so I added a Middleware that will strip html tags using `strip_tags`, and since `strip_tags` can be tricked with malformed markup remaining input is encoded using htmlentities.

Middleware is at `app/Http/Middleware/SanitizeInput.php` and can be tuned for specific keys adding them to the `$except` array:

```
/**
 * The names of the attributes that should not be trimmed.
 *
 * @var array
 */
protected $except = [
    'password',
    'password_confirmation',
    '_token',
    ''
];
```

Proof of Concept (PoC) *

1. Download and setup monica
2. Create new contact, introducing payload as name:
`<svg/onload=alert("firstname1")><script> alert("firstname2_xss")</script> <script> alert("midname_xss")</script> <script> alert("lname_xss")</script><svg/onload=alert(1)>(<svg/onload=alert("nickie1")>)`
3. Go to Settings -> Audit logs
4. XSS is triggered

localhost:8081/settings/auditlogs

localhost:8081 dice
midname_xss

Panel de control Contactos Diario

Panel de control > Ajustes > Usuarios

Configuración de cuenta
Personalización
Almacenamiento
Exportar datos
Importar datos
Usuarios
Administrar tags
API
Barricade P&M

Everything that happened to this account

Added

Aceptar

After fix introduced data is displayed as text and no XSS is executed

Stored XSS will be also stripped out and encoded after contact is edited

User Acceptance Testing (UAT)

Functionality is unaffected, contact link works as usual

localhost:8081/people/h:4G7r3K91nkYn2LWe5m...oad=alert("firstname1")><script> alert("firstname2_xss")

Hi @huntr-helper @JamieSlome @alromh87
 Thank you for your submit.
 However, I cannot merge this change.
 htmlentities is not to be used directly, as Laravel already handle this kind of security checks (but I don't know yet why it's not doing it in this case).
 Anyway, if you want to consider it, please remove the first changes done in the commit [3871537](#) , because it has been superseded by another fix [here](#).

alromh87 commented on Oct 15, 2020

I will update tomorrow, I found in many places protection was disabled due to using {!! \$log['description'] !!}

alromh87 mentioned this pull request on Oct 16, 2020

Removed use of htmlentities as requested by maintainer 418sec/monica#3

➡ Merged

alromh87 commented on Oct 16, 2020

@asbiin Updated as per requested and updated with upstream, use of htmlentities was removed when presenting information, only middleware for sanitizing before storage is preserved.

-O- alromh87 Merge branch 'master' into 2-other-monica

@alromh87 any update on that fix? Current changes still uses htmlentities() , and it should never been required.
