

Security Bulletin. Vulnerability found in Email Marketer v6.0.0 through v6.5.0

Last Updated September 29, 2022

[Home](#) » [Security Bulletins](#) » Security Bulletin. Vulnerability found in Email Marketer v6.0.0 through v6.5.0

Interspire Email Marketer version 6.0.0 to 6.5.0 that have the Surveys add-on enabled allows arbitrary file upload via `surveys_submit.php` "create survey and submit survey" operation, which can cause a `.php` file to be accessible under a `/admin/temp/surveys/` URI.

We recommend that all users of Email Marketer immediately take one of the following corrective actions.

If you are not using the survey functionality of Email Marketer:

- Disable the survey add on from the addon management screen:

Disable the Surveys Addon

- Backup and delete the file `~/surveys_submit.php`

Or

If you are using the survey functionality of Email Marketer:

- [Download](#) the updated version surveys_submit.php
- Backup and delete the file `~/surveys_submit.php`
- Unzip the updated version of surveys_submit.php in your installation directory

Or

Update to the latest version of Email Marketer:

If you have an active download link, get and update to the latest version of Email Marketer which at the time of this writing is version 6.5.1.

The CVE number is CVE-2022-40777. Discovered by Nguyen Huy Vinh, Le Nguyen of Viettel Cyber Security
