[@JetBrains](#) were including valid Apple code-signing and Artifactory credentials in Windows PyCharm builds for a few months, due to their build process dumping env vars in to one of the included stub files. Great response from their team - credentials were rotated within hours 1/2

Replying to [@_ruby](#)

2/2 and a full audit found no unauthorized usage. Good example of how external attack surface is much more than just what servers are reachable over the internet. Here's the full stub file with the leak, for those who are curious: gist.github.com/rubyroobs/5d27... #retweetabledisclosure
