# Netgear R7000P has a Stack Buffer Overflow Vulnerability

## Product

1. product information: <https://www.netgear.com>
2. firmware download: [http://www.downloads.netgear.com/files/GDC/R7000P/R7000P-V1.3.0.8\\_1.0.93.zip](http://www.downloads.netgear.com/files/GDC/R7000P/R7000P-V1.3.0.8_1.0.93.zip)

## Affected version

V1.3.0.8

## Vulnerability

The stack overflow vulnerability is in /usr/sbin/httpd. The vulnerability occurs in the sub\_3C5AC function, which can be accessed via the URL <http://routerlogin.net/OPENVPN.htm> .

```

48 sub_1A54C(a1, "openvpn_protocol", v37, 8);
49 sub_1A54C(a1, "openvpn_service_port", v36, 8);
50 sub_1A54C(a1, "openvpn_br_ip_start", v31, 16);
51 sub_1A54C(a1, "openvpn_br_ip_end", v30, 16);
52 sub_1A54C(a1, "openvpn_server_ip", v29, 16);
53 sub_1A54C(a1, "openvpn_push1", v28, 512);
54 sub_3F8D4();

```

```

240 if ( v28[0] )
241 {
242     sprintf(dest, "push \"%s\"", v28); vuln
243     fprintf(v22, "%s\n", dest);
244 }
245 if ( !strcmp(v32, "Redirect") )
246 {
247     acosNvramConfig_set((int)"openvpnRedirect", (int)"enable");
248     strcpy(dest, "push \"redirect-gateway def1\"");
249 }

```

In this function, `openvpn_push1` is controllable and will be passed into the `v28` variable and `v28` will be passed into stack `dest` by `sprintf`. It is worth noting that there is no size check, which leads to a stack overflow vulnerability.
