

# Division by zero in TFLite's implementation of `Split`

Low

mihairmaruseac published GHSA-97wf-p777-86jq on May 12, 2021

Package

 tensorflow-lite (pip)

Affected versions

< 2.5.0

Patched versions

2.1.4, 2.2.3, 2.3.3, 2.4.2

Description

Impact

The implementation of the `Split` TFLite operator is [vulnerable to a division by zero error](#):

```
TF_LITE_ENSURE_MSG(context, input_size % num_splits == 0, "Not an even split");
const int slice_size = input_size / num_splits;
```

An attacker can craft a model such that `num_splits` would be 0.

Patches

We have patched the issue in GitHub commit [b22786e7e9b7bdb6a56936ff29cc7e9968d7bc1d](#).

The fix will be included in TensorFlow 2.5.0. We will also cherry-pick this commit on TensorFlow 2.4.2, TensorFlow 2.3.3, TensorFlow 2.2.3 and TensorFlow 2.1.4, as these are also affected and still in supported range.

For more information

Please consult [our security guide](#) for more information regarding the security model and how to contact us with issues and questions.
