XRAY-211352 - devcert ReDoS

CVE-2022-1929 | CVSS 5.9

JFrog Severity: Medium

Published 29 May. 2022 | Last updated 29 May. 2022

Summary

Exponential ReDoS in devcert leads to denial of service

Component

[devcert](#)

Affected versions

devcert (1.2.0], fixed in 1.2.1

Description

An exponential ReDoS (Regular Expression Denial of Service) can be triggered in the devcert npm package, when an attacker is able to supply arbitrary input to the `certificateFor` method

PoC

```
'0' + '000'.repeat(i) + '\\x00'
```

Vulnerability Mitigations

No mitigations are supplied for this issue
