The system does not verify the host value. If the host value is modified, the link returned by the website will splice the malicious host value, like this:

Raw	Headers	Hex	HTML	Render
61			<code><div id="fuel_body"></code>	
62				
63				
64			<code><!-- TOP MENU PANEL --></code>	
65			<code><div id="fuel_top"></code>	
66			<code><div id="nav_toggle">Menu</div></code>	
67			<code><h1 id="fuel_site_name">My Website</code>	
68			<code></h1></code>	
69			<code></div></code>	
70			<code><!-- LEFT MENU PANEL --></code>	
71			<code><div id="fuel_left_panel"></code>	
72			<code><div id="fuel_left_panel_inner"></code>	
73			<code><div class="left_nav_section" id="leftnav_site"></code>	
74			<code><h3>Home</h3></code>	
75			<code></code>	
76			<code><li class="active">Dashboard</code>	
77			<code>Pages</code>	
78			<code>Blocks</code>	
79			<code>Navigation</code>
