Reflected Cross Site Scripting (XSS) vulnerability exists in edoc-doctor-appointment-system v1.0.1 . A successful exploit could allow the attacker to execute arbitrary script code which could lead to stealing or modifying of authentication information of the user, such as data relating to his or her current session.

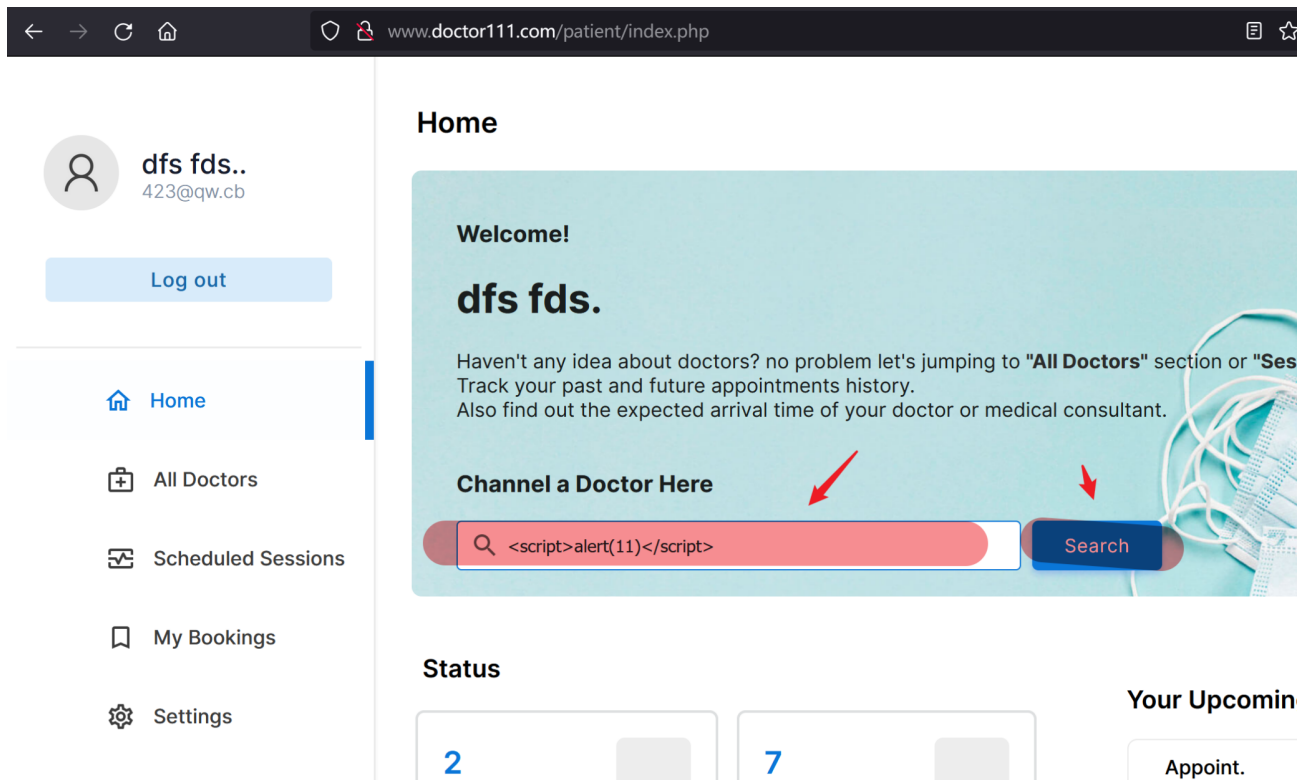

vendor:<https://github.com/HashenUdara/edoc-doctor-appointment-system>

Vulnerability Position: <http://ip/patient/index.php>

Log in to the <http://ip/login.php>
