Contributor

Describe the bug

hertz path-traversal bug in windows server.

Hackers can read any file in windows server since there are no backslash restrictions.

Since backslash doesn't work in linux filesystem, the bug works in a very limited production environment.

Screenshots

Hertz version:

v0.3.0

Environment:

any windows server any go version and any hertz version

fix suggestion

Replace all backslashes with forwardslashes at the beginning of the normalizePath function.
