It can fix problem. Thanks for the quickly response

mbeccati [Revive Adserver staff](#) closed the report and changed the status to **Resolved**.

Feb 11th (3 years ago)

Thanks. The fix will be included in the next release with not much urgency as exploitability requires physical access to a logged in machine. The vulnerability will be disclosed at that time. What name should we use for you? Is your HackerOne username ok, or do you prefer something else?
