CVE-2021-38154

[IETF-PP][2701-01] ### Protocol Police Catwalk Alert ###

Canon copys/fax/scanner hardware using Catwalk Server, write access for user, etc.

Visitors to remote portal receive full read and write permissions in all server functions. When presented with the login option in the portal, choose "General System Manager Mode" is reserved for system managers, leaving visitors with 1 option. Since visitors never receive a pin code, none needs to be used to get full control. Hardware from 2012 - up and including 2020 has been visited and re-written with success. We're remain unbroken, again, more shattered, and we've only just begun.)
