Hello, I found a **MEMORY LEAK** in main.c:90  
**Below are steps followed to reproduce crash**  
Download latest source code from: <https://github.com/cloudwu/rudp>, compiled with clang and ASAN `export CFLAGS="-g -fsanitize=address" LDFLAGS="-fsanitize=address"` before make

### ASAN Output

```
=====
==25482==ERROR: LeakSanitizer: detected memory leaks

Direct leak of 120 byte(s) in 1 object(s) allocated from:
    #0 0x4b8818 (/root/temp/ICS/rudp/rudp+0x4b8818)
    #1 0x4e9d94 (/root/temp/ICS/rudp/rudp+0x4e9d94)

SUMMARY: AddressSanitizer: 120 byte(s) leaked in 1 allocation(s).
```

it seems that you have a double free issue.

Owner

Thanks, it's a memory leak, but I don't think it's a double free issue.

Author

I'm not familiar with your program structure, but it looks like that some space was not free properly, I will close this issue.
