Describe the bug

When a junction is created in the \$APP Base directory on windows

eg. `mklink /J C:\Users\<user>\AppData\Roaming\<identifier>\TestFolder C:\Dev\TestFolder`

The folder is accessible together with all files and folders inside using `fs` if read from the root directory

```
const entries = await readDir('', { dir: BaseDirectory.App, recursive: true });
```

But when trying to read the folder directly using

```
const entries = await readDir('TestFolder', { dir: BaseDirectory.App, recursive: true });
```

it fails with an error

```
Uncaught (in promise) path not allowed on the configured scope: C:\Users\<user>\AppData\Roaming\<identifier>\TestFolder
```

Reproduction

1. Create Junction in \$APP directory
2. Try to access that directory recursively with `readDir` with empty `dir` parameter
3. Folder and its contents can be read
4. Try to access that directory again with `readDir` but with the name of the directory as `dir` parameter

Expected behavior

I would expect to either not be able to access the folder at all, or be able to access it directly as well if it is accessible from root recursively.

Platform and versions

Environment

- › OS: Windows 10.0.19044 X64
- › Webview2: 103.0.1264.77
- › MSVC:
 - Visual Studio Community 2019
 - Visual Studio Build Tools 2019
- › Node.js: 16.13.1
- › npm: 8.1.2
- › pnpm: 6.11.0
- › yarn: 1.22.15
- › rustup: 1.25.1
- › rustc: 1.62.1
- › cargo: 1.62.1
- › Rust toolchain: stable-x86_64-pc-windows-msvc

Packages

- › @tauri-apps/cli [NPM]: 1.0.5
- › @tauri-apps/api [NPM]: 1.0.2
- › tauri [RUST]: 1.0.5,
- › tauri-build [RUST]: 1.0.4,
- › tao [RUST]: 0.12.2,
- › wry [RUST]: 0.19.0,

App

- › build-type: bundle
- › CSP: unset
- › distDir: ../dist
- › devPath: http://localhost:5173/
- › framework: Vue.js

App directory structure

```
├─ .vscode
├─ dist
├─ node_modules
├─ public
├─ src
└─ src-tauri
```
