Advantech R-SeeNet telnet_form.php Reflected XSS vulnerability

JULY 15, 2021

CVE NUMBER

CVE-2021-21799

Summary

Cross-site scripting vulnerabilities exist in the telnet_form.php script functionality of Advantech R-SeeNet v 2.4.12 (20.10.2020). If a user visits a specially crafted URL, it can lead to arbitrary JavaScript code execution in the context of the targeted user's browser. An attacker can provide a crafted URL to trigger this vulnerability.

CWE

CWE-79 - Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Details

R-SeeNet is the software system used for monitoring Advantech routers. It continuously collects information from individual routers in the network and records the data into a SQL database.

This vulnerability is present in telnet_form.php script, which is a part of the Advantech R-SeeNet web applications. A specially crafted URL by an attacker and visited by a victim can lead to arbitrary JavaScript code execution.

The telnet_form.php script accepts hostname parameter coming from the user via a HTTP request:

```
php/telnet_form.php
Line 11  if(isset($_GET['hostname'])) && ($_GET['hostname'] != '')
Line 12  { // hostname zadano
Line 13      $hostname = $_GET['hostname'];
Line 14  }
```

The parameter is not sanitized in a context of XSS payload and further is embedded into HTML code :

```
Line 44      <title>Telnet <?php echo($hostname)?></title>
```

Request

```
GET /php/telnet_form.php?hostname=%3C/title%3E%3Cscript%3Ealert(1)%3C/script%3E%3Ctitle%3E HTTP/1.1
Host: localhost
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:86.0) Gecko/20100101 Firefox/86.0
