Stored XSS of PAGE control #36

Kinfedge opened this issue on Aug 27, 2019 · 0 comments

Kinfedge commented on Aug 27, 2019

The vulnerability is founded in laracms v1.0.1.

Hackers can inject a script in the place where the page is managed.

It's content accept all user input and store to the database. While other user accessing this website will excute the script.

You should filter and escape the output which is picked up from database before show it to the users.
