

Buffer Access with Incorrect Length Value in radareorg/radare2

Valid

Reported on Jan 22nd 2022

Description

This vulnerability is of out-of-bound read which accesses the address beyond/past the buffer. The bug exists in latest stable release (radare2-5.5.4) and latest master branch (ed2030b79e68986bf04f3a6279463ab989fe400f, updated in Jan 22, 2022). Specifically, the vulnerable code and the bug's basic explanation is highlighted as follows:

```
// shlr/java/class.c
R_API RBinJavaAttrInfo *r_bin_java_inner_classes_attr_new(RBinJavaObj *bin,
...
    // line 3741
    // the buffer[offset] can access memory beyond the buffer's size
    // in our poc, reading the second byte of the USHORT is out of the buff
    attr->info.inner_classes_attr.number_of_classes = R_BIN_JAVA_USHORT (bu
...

```

Proof of Concept

Build the radare2 (5.5.4 or latest commit ed2030b79e68986bf04f3a6279463ab989fe400f) and run it using the [input POC](#).

```
# build the radare2 with address sanitizer
export CFLAGS=" -fsanitize=address "; export CXXFLAGS=" -fsanitize=address
CFGARG=" --enable-shared=no " PREFIX=`realpath install` bash sys/build.sh
# disable some features of address sanitizer to avoid false positives
export ASAN_OPTIONS=detect_leaks=0:abort_on_error=1:symboli
# trigger the crash
./radare2 -A -q POC_FILE
```

```

Impact

The bug causes the program reads data past the end of the intended buffer. Typically, this can allow attackers to read sensitive information from other memory locations or cause a crash. More details see [CWE-125: Out-of-bounds read](#).
