There is a possible information disclosure issue in Active Resource. This vulnerability has been assigned the CVE identifier CVE-2020-8151.

Versions Affected: All.

Not affected: None.

Fixed Versions: 5.1.1

There is an issue with the way Active Resource encodes data before querying the back end server. This encoding mechanism can allow specially crafted requests to possibly access data that may not be expected.

Impacted code will look something like this:

...

```
require 'activeresource'
```

```
class Test < ActiveRecord::Base
  self.site = 'http://127.0.0.1:3000'
end
```
