

CVE-2020-15595

[Share](#)

Abstract Advisory Information

An issue was discovered in Zoho Application Control Plus before version 10.0.511.

The Element Configuration feature (to configure elements included in the scope of elements managed by the product) allows an attacker to retrieve the entire list of the IP ranges and subnets configured in the product, and consequently obtain information about the cartography of the internal networks to which the product has access.
