I found a bug very critical in Zenar CMS version 9.3.

Below are steps to reproduce the bug

1. Create file shell php

The screenshot shows a web browser window with a URL bar containing a Zenar.io CMS endpoint. The page displays a success message: "File uploaded successfully". Below the message, there is a table with columns "Name", "Size", and "Type". The table contains one entry: "shell.php" with a size of "1 KB" and a type of "text/plain". The "Type" column is highlighted with a red box.

1. Check shell

The screenshot shows a web browser window with a URL bar containing a Zenar.io CMS endpoint. The page displays a success message: "Command executed successfully". Below the message, there is a table with columns "Name", "Size", and "Type". The table contains one entry: "shell.php" with a size of "1 KB" and a type of "text/plain". The "Type" column is highlighted with a red box.
