## Multiple Cross Site Scripting in X2CRM 7.1 #183

Hades484 opened this issue on Feb 11, 2021 · 0 comments

Hades484 commented on Feb 11, 2021

Hi,

I have found the multiple stored XSS in the X2crm version 7.1. I like to report them and get the CVE.

Location: <http://localhost/x2crm/x2engine/index.php/contacts/create>

Parameter: Last Name

Payload inserted

The screenshot shows the 'Update Contact' form in X2CRM. The 'Last Name' field is highlighted with a red box and contains the payload `<script>alert(2)</script>`. The form includes sections for Contact Info, Sales & Marketing, Address, and Background Info. The 'Save' button is visible in the top right corner.

Execution of the payload

The screenshot shows the 'Update Contact' form with the payload `<script>alert(2)</script>` in the 'Last Name' field. An alert box is displayed in the center of the screen, showing the number '2'. The form includes sections for Contact Info, Sales & Marketing, Address, and Background Info. The 'Save' button is visible in the bottom right corner.

payload inserted

### Execution of the payload

The screenshot displays a web application interface with a navigation bar at the top containing links for 'Activity', 'Contacts', 'Accounts', 'Marketing', and 'Leads'. The main content area is titled 'Activity Feed' and shows a recent activity: 'You created a new contact, Test <script>alert(3)</script>' 19 minutes ago. A red box highlights a terminal window in the center, showing a command prompt where the user has entered 'back\_to\_admin' and received a response displaying a list of user comments. The right sidebar contains a search bar, a filter icon, a 'Clock' widget, a calendar for February 2021, and another 'Activity Feed' section.
