Send to repeater,

The screenshot displays the Burp Suite interface. On the left, the 'Intercept' tab is active, showing a request to 'http://localhost:80 [127.0.0.1]'. Below the request, there are buttons for 'Forward', 'Drop', and 'Intercept'. The 'Raw' tab is selected, showing the raw HTTP request details. On the right, the 'Send to Repeater' menu is open, with a red arrow pointing to the 'Send to Repeater' option. The menu also includes options like 'Send to Sequencer', 'Send to Comparer', 'Send to Decoder', 'Request in browser', 'captcha-killer', 'HopLa', 'Send to turbo intruder', 'burpFakeIP', 'Engagement tools', 'Change request method', and 'Change body encoding'.

Intercept HTTP history WebSockets history

Request to http://localhost:80 [127.0.0.1]

Forward Drop Intercept

Raw Params Headers Hex

pretty Raw in Actions

POST /yzmcms/comment/index/init
Host: localhost
User-Agent: Mozilla/5.0 (Windows; UoSafari/537.36
Accept: text/html,application/
Accept-Language: zh-CN,zh;q=0.
Accept-Encoding: gzip, deflate

Send to Repeater Ctrl+F

Send to Sequencer

Send to Comparer

Send to Decoder

Request in browser

captcha-killer

HopLa

从乌云搜索类似漏洞

Send to turbo intruder

burpFakeIP

Engagement tools

Change request method

Change body encoding

Manually send several times, you can batch brush malicious comments.
