

MaianAffiliate v.1.0 - Code execution and stored XSS (authenticated)

<https://www.maianaffiliate.com/>

How it works

To exploit this vulnerability one has to log into MaianAffiliate admin panel and add a new product. The injected payload is reflected on the affiliate mane page (for all authenticated and unauthenticated visitors).

The screenshot shows the 'Admin CP' interface of MaianAffiliate. The 'Product' tab is active. The 'Product Name' field contains 'Test'. The 'Product URL' field contains the malicious payload '<script>alert('XSS')</script>'. The 'Product Information' section has a rich text editor with the text 'test'. The 'Enable Product' section has the 'Yes' radio button selected. At the bottom, there are 'Update' and 'Cancel' buttons.

This is for educational purposes only. I do not encourage nor do I take responsibility for any unethical or illegal activities related to this exploit.
