## What is myFAX ?

The myFAX network fax server is a turnkey solution that connects to PSTN fax lines. It converts faxes to TIFF files allowing you to receive faxes wherever you are as e-mails or desktop and send faxes from any application that can print. The system provides distributed faxing capabilities, over a WAN, from a corporate office to small remote offices as well as to field sales people. In addition, it provides secure , convenient faxing for LAN users offering a high degree of privacy for both the sender and recipient. myFAX provide web base management interface for easy setup. (Based on eRam - <http://www.eram.com.sa/myfax/index.html>)

"This CVE does not relate to J2 Global's MyFax services."

## What Type of Vulnerability ?

Unauthorized Access to Log File

## Vulnerable URL :

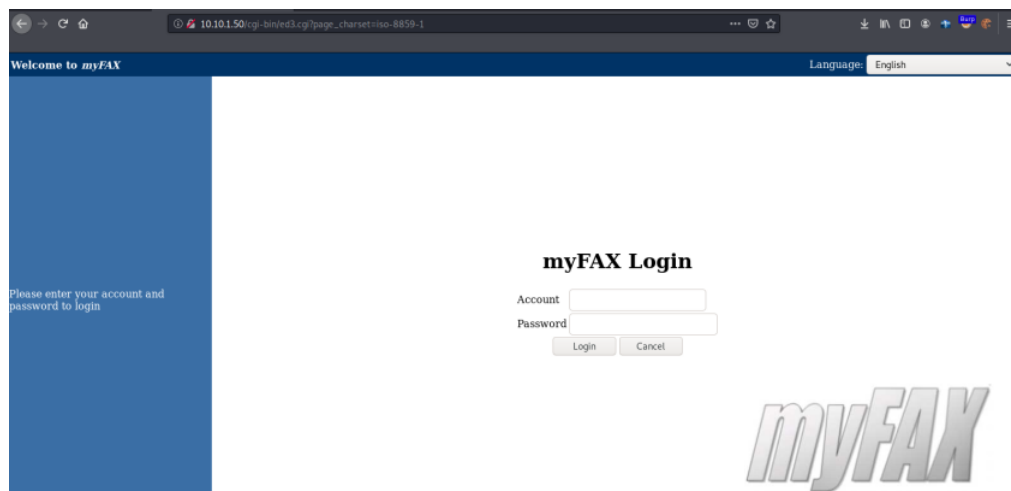

<http://server/log.access.txt>

## CVE URL :

<https://nvd.nist.gov/vuln/detail/CVE-2020-24038>

## PoC :
