CVE-2022-30776

Reflected XSS on sites using Atmail hosting

Discovered by : Ronit Bhatt

Vulnerable Version: Atmail 6.5.0

Vendor Homepage: <https://help.atmail.com/hc/en-us/sections/115003283988>

Bug Description:

Cross-site scripting (XSS) vulnerability in sites using outdated Atmail hosting version 6.5.0 allows remote attackers to inject arbitrary web script or HTML via the “**error**” parameter.

Steps To Reproduce:

1. Visit the login page of the site using atmail hosting.
