Description: I found a file upload vulnerability. In this vulnerability, we can use upload to change the upload path to the path without. Htaccess file. Upload an. Htaccess file and write it to AddType application / x-httpd-php.jpg. In this way, we can upload a picture with shell, treat it as PHP, execute our commands, so as to take down the whole website Resources and permissions for.

Because I don't know why my picture can't be uploaded, so I wrote the detailed utilization process in this page, hope you can see it <https://shimo.im/docs/Ch9CphJt8XwTvQ3d>

I would like to submit this vulnerability to CVE mitre. I hope you can fix this vulnerability as soon as possible

Looking forward to your response.

is it fixed? or this project is dead?

**yama** commented on Jul 25, 2021 Contributor

@faisalFs10x  
ok, I'll fix it later.
