futures\_task::noop\_waker\_ref can segfault due to dereferencing a NULL pointer

**Reported** May 3, 2020

**Issued** October 31, 2020 (last modified: October 19, 2021)

**Package** [futures-task](#) ([crates.io](#))

**Type** Vulnerability

**Categories** [denial-of-service](#)

**Keywords** [#NULL-pointer-dereference](#) [#memory-management](#)

**Aliases** [CVE-2020-35907](#)

**Details** <https://github.com/rust-lang/futures-rs/issues/2091>

**CVSS Score** 5.5 MEDIUM

<b>CVSS Details</b>	<b>Attack vector</b>	Local

**Patched** [>=0.3.5](#)

Affected Functions	Version
<code>futures_task::noop_waker_ref</code>	<a href="#">&gt;=0.3.0</a>

## Description

Affected versions of the crate used a `UnsafeCell` in thread-local storage to return a noop waker reference, assuming that the reference would never be returned from another thread.

This resulted in a segmentation fault crash if `Waker::wake_by_ref()` was called on a waker returned from another thread due to it attempting to dereference a pointer that wasn't accessible from the main thread.

Reproduction Example (from issue):

```
use futures_task::noop_waker_ref;

fn main() {
    let waker = std::thread::spawn(|| noop_waker_ref()).join().unwrap();
    waker.wake_by_ref();
}
```

The flaw was corrected by using a `OnceCell::Lazy` wrapper around the noop waker instead of thread-local storage.
