1. =====
2. - CVEID: CVE-2021-26844
3. - PRODUCT: PA Server Monitor
4. - VERSION: 8.2.1.1
5. - VENDOR: Power Admin LLC
6. - PROBLEM TYPE: Cross-Site Scripting (XSS)
7. - DESCRIPTION: A Cross-Site Scripting (XSS) vulnerability in Power Admin PA Server Monitor 8.2.1.1 allows remote attackers to inject
   arbitrary web script or HTML via Console.exe.
8. =====
9.
10. Description:
11. 1. Navigate to Settings -> Remote Access -> hint.
12. 2. Insert the following Cross-Site Scripting (XSS) payload.
13.     <script>alert(document.domain)</script>
14. 3. Refresh the page to trigger Cross Site Scripting (XSS) in the application.
15.
16. Business Impact:
17. Cross-site scripting (XSS) vulnerabilities allow remote attackers to inject arbitrary scripts into a victim's web browser. An attacker can
   leverage this vulnerability by passing the malicious script to the application, which then gets passed to the user. Since the malicious code
   is passed through the victim's browser via the application, the browser cannot differentiate between legitimate and malicious code. The
   malicious code can retrieve cookies, session tokens, and other sensitive information in the application. It even has the potential to
   deface the application by rewriting the contents of the HTML page.
18.
