Hi team,

I find XSS via modul post loop in Pages

Step:

1. add section in manage sections

test-Administration

WYSIWYG

Add

WBCE is released under the GNU General Public License

2. add new post then choose options in modify page (a new post must be created for the setting to take effect)

The image displays two screenshots of the WBCE CMS administration interface, showing the process of adding a new post and then selecting options for it.

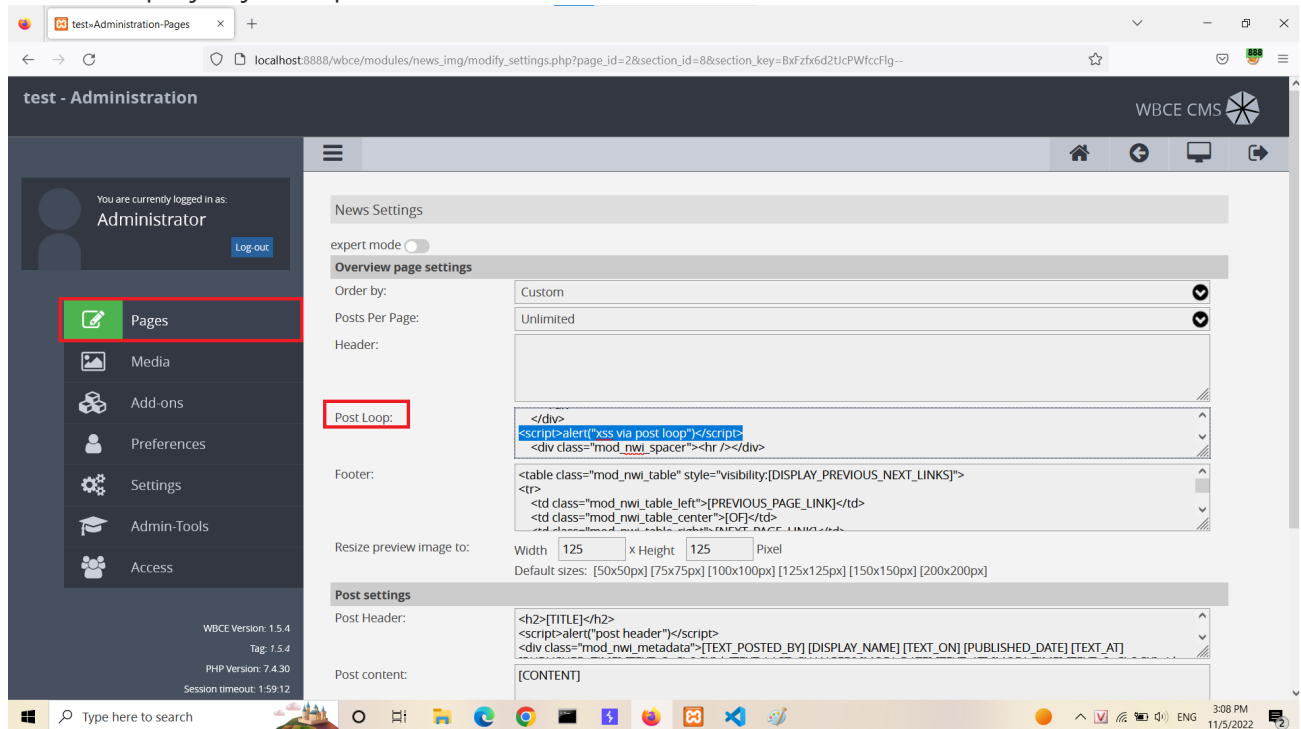

Top Screenshot: The interface shows the 'Pages' section selected in the left sidebar. The main content area displays the 'Block: Content Modul: News with Images ID: 8 Name:' form. The 'Options' button is highlighted with a red box. The 'Add post' button is also visible.

Bottom Screenshot: The interface shows the 'Options' section selected in the left sidebar. The main content area displays a table of posts. The 'Options' button is highlighted with a red box. The table shows a post with the title 'ad' and the start date '05.11.2022 15:10'. The 'Add post' button is also visible.

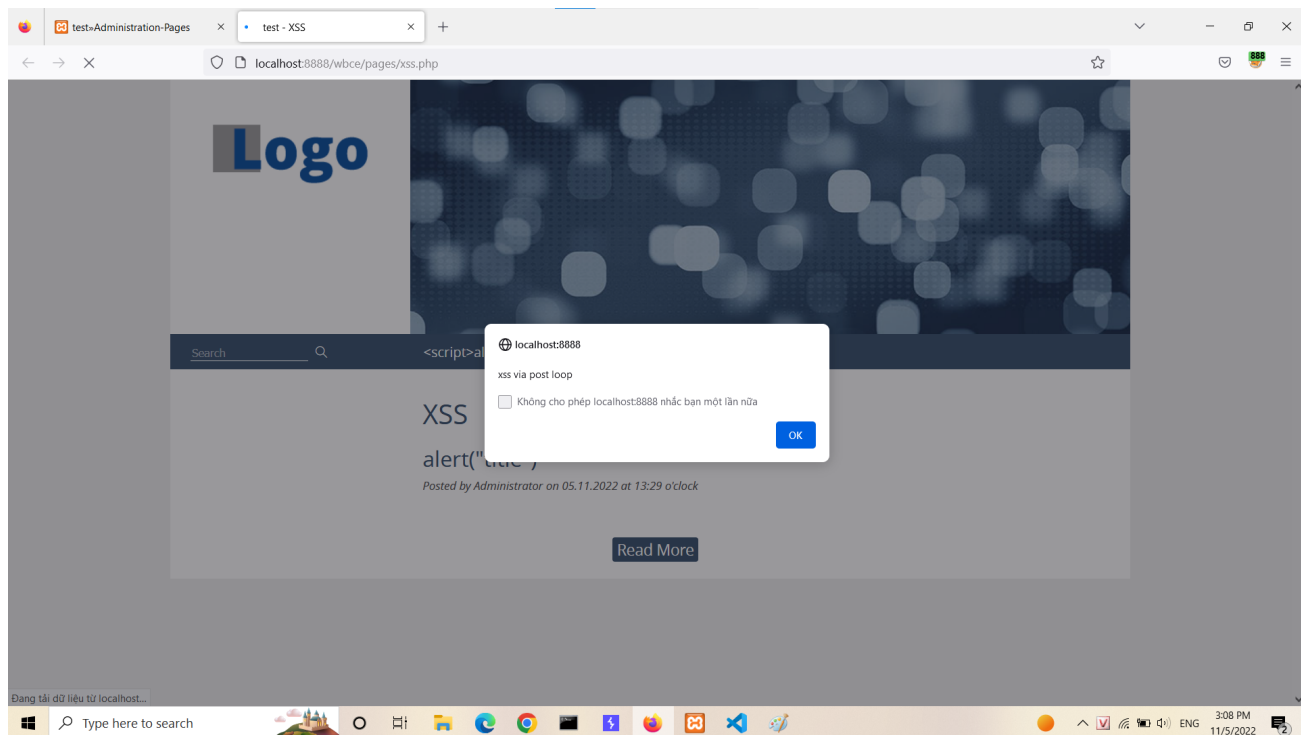

Table Data:

Title	Group	Active	Tags	Start date	End date
ad		<input checked="" type="checkbox"/>	0	05.11.2022 15:10	

3. In Post Loop inject javascript

4. save and view
