

# [core] release connections in CLOSE\_WAIT & CON\_STATE\_READ\_POST state #115

\$\$ Closed gmd20 wants to merge 1 commit into lighttpd:master from gmd20:patch-3 ☐

Conversation 15 Commits 1 Checks 0 Files changed 1

Many CLOSE\_WAIT connetions are seen on live sytem, and there connections will never been closed. Extra Logs in connection\_check\_timeout function show that these connections are in CON\_STATE\_READ\_POST. state

It is likely FDEVENT\_IN is unset after FDEVENT\_RDHUP event is received, and no other code will check these connections afterwards

This change treats this case as "connection read-timeout".

-O- (core) release connections in CLOSE\_WAIT & CON\_STATE\_READ\_POST state 0d2966b

## gstrauss commented on Sep 7

Member

Many CLOSE\_WAIT connetions are seen on live sytem, and there connections will never been closed.

Please describe your issue with (much) more detail. Your proposed "solution" is not valid. Both proposed changes are wrong.

Author

Many CLOSE\_WAIT connections are seen on live system, and there connections will never been closed.

Please describe your issue with (much) more detail. Your proposed "solution" is not valid. Both proposed changes are wrong.

Hi gstrauss, this is another issue found on CentOS-8 with lighttpd-1.14.66.

1. I found there were more and more CLOSE-WAIT connections, and these connections were never closed. Finally the number of connections exceeds the "server.max-connections = 1024" limit, and lighttpd ran out of conection.

                                    172.31.0.1:80
                                                           172.16.3.183:43705 users:
CLOSE-WAIT 0
(("lighttpd",pid=24691,fd=80))
CLOSE-WAIT 0
                                    172.31.0.1:80
                                                           172.16.11.75:41085 users:
(("lighttpd",pid=24691,fd=215))
```

- 2. I verified that no active traffic on these CLOSE-WAIT connections(using tcpdump and strace).
- 3. I added the following debug log, and it printed "state CON\_STATE\_READ\_POST".

- 4. In my environment, long-lived connections is unexpacted, and this patch did solve the problem.

This is wrong. If there is data that has been read from the client socket, but not yet processed, lighttpd attempts to process that data before considering the read side of the connection to have been shutdown (SHUT\_RD)

This is wrong. If there is data that has been read from the client socket, but not yet processed, lighttpd attempts to process that data before considering the read side of the connection to have been shutdown (SHUT\_RD)

Is r->keep\_alive for "HTTP/1.1 keepalive" only? No other function checks this variable except connection\_handle\_response\_end\_state.

gstrauss on Sep 10

Member

No. Wrong again. git log -G 'r->keep\_alive'

This is wrong. If lighttpd is not waiting to read from the socket, there should not be a read timeout. If lighttpd is streaming the request body to the backend, then lighttpd might have connection in state CON\_STATE\_READ\_POST.

CentOS 8 was end-of-lifed 2021-12-31. Is there a (good) reason why you are wasting so much of your time on old, dead, and buried OS distributions?

In my environment, long-lived connections is unexpacted,

Consider enabling lighttpd.conf debugging to capture the requests that later end up in this state. Consider strace to capture what is going on in these connections. Consider attaching a debugger to lighttpd to find out more information about the state of the request that is not being closed. Has any data been received for the request body? How much data? What is the User-Agent for the connections that hang and are they all the same?

If a connection is in CON\_STATE\_READ\_POST, but lighttpd is not waiting to read on the socket, then something else has hung. You have not shared your lighttpd.conf, so I do not know if you you are using server.stream-request-body, or what backend you are using. Assuming that you are using mod\_cgi, see <a href="https://wiki.lighttpd.net/Docs\_ModCGI/">https://wiki.lighttpd.net/Docs\_ModCGI/</a> and try cgi.limits with "read-timeout" and "write-timeout" set to appropriate values for your system. If using mod\_fastcgi, see <a href="https://wiki.lighttpd.net/Docs\_ModFastCGI/">https://wiki.lighttpd.net/Docs\_ModFastCGI/</a> and set "read-timeout" and "write-timeout" in fastcgi.server. These timeouts are available since lighttpd 1.4.60 to work around poorly written backends.

Here's a strong hint: your problems are likely with your ancient software or poorly written backends, rather than issues in lighttpd.

Sorry for misinformation, actually the OS is rocky-linux-8.

Consider strace to capture what is going on in these connections. Consider attaching a debugger to lighttpd to find out more information about the state of the request that is not being closed. Has any data been received for the request body? How much data? What is the User-Agent for the connections that hang and are they all the same?

It is an important service, I can not interrupt it.

I had tried strace, no read/write or other system calls were seen on there fd(s)

It is hard to capture the packets that causes the problem. It may take hours to reproduce.

One more thing I know is all there connections are in CON\_STATE\_READ\_POST state and are not HTTP2 connection.

Here's a strong hint: your problems are likely with your ancient software or poorly written backends, rather than issues in lighttpd.

mod\_fastcgi and php-7.4 is used.

At the time lighttpd had hundreds of CLOSE\_WAIT sockets, no alive unix socket was established to "/tmp/php-fastcgi.sock",

and request to the "index.php" page still worked properly. So I don't think it is the backend hangs.

server.stream-request-body is not set.

Sorry for misinformation, actually the OS is rocky-linux-8.

That is gross sloppiness and wastes my time. You suggested patches are wrong, so I am closing this PR.

Please see lighttpd forum post: How to get support

You seem to have missed direct hints such as "You have not shared your lighttpd.conf", and other config settings that I have posted above.

Maybe look into using gdb to get a core dump of your running process so that you can further analyze the (connection \*) of the stuck connections.
