

Arbitrary code execution

Moderate daftspunk published GHSA-5hfj-r725-wpc4 on Jan 14

php october/system (Composer)

Affected versions

Patched versions 1.0.472, 1.1.5 1.0.473, 1.1.6

Description

Impact

Assuming an attacker with access to the backend is able to execute PHP code by using the theme import feature. This will bypass the safe mode feature that prevents PHP execution in the CMS templates.

Patches

Issue has been patched in Build 473 and v1.1.6

Workarounds

Apply 167b592 to your installation manually if you are unable to upgrade.
