Bug

0xdd96 commented on Jul 26 • edited •

Describe the bug

SEGV on unknown address still exists in Assimp::XFileImporter::CreateMeshes.

This is similar to issue #1728. Note that #1728 reported wrong type of the vulnerability, as it is not a NULL pointer dereference. Patch 39ce3e1 was misguided by #1728, leaving this vulnerability unfixed.

To Reproduce

Steps to reproduce the behavior: version: latest commit 3c253ca poc:null CreateMeshes.zip

```
git clone https://github.com/assimp/assimp.git
cd assimp
mkdir build
cd build
CFLAGS="-g -00" CXXFLAGS="-g -00" cmake -G "Unix Makefiles" -DBUILD_SHARED_LIBS=OFF -
DASSIMP_BUILD_ASSIMP_TOOLS=ON ..
./assimp info $POC
```

Expected behavior

```
user@c3ae4d510abb:$ ./bin/assimp info poc
Launching asset import ...
Validating postprocessing flags ... OK
Segmentation fault (core dumped)
user@c3ae4d510abb:$ ./bin/assimp info poc
Launching asset import ...
Validating postprocessing flags ... OK

Vulnerability analysis

Using gdb to trace this PoC, the vulnerability occurs in line 340 of XFileImporter.cpp, due to idx=16256 is larger than the capacity of sourceMesh->mNormals (24).

After tracing it, I found that pMesh->mNormals assigned numNormals elements in line 514-519 of XFileParser.cpp, then line 535-536 saved the result of ReadInt to pMesh->mNormFaces[a].mIndices without checking if it is in the correct boundary (<numNormals). This eventually leads to the bug above.

```
assimp/code/AssetLib/X/XFileParser.cpp
Lines 513 to 541 in 3c253ca
513
         unsigned int numNormals = ReadInt();
         pMesh->mNormals.resize(numNormals);
514
515
         // read normal vectors
516
         for (unsigned int a = 0; a < numNormals; ++a) {</pre>
517
518
             pMesh->mNormals[a] = ReadVector3();
519
         }
520
521
         // read normal indices
         unsigned int numFaces = ReadInt();
522
         if (numFaces != pMesh->mPosFaces.size()) {
523
524
             ThrowException("Normal face count does not match vertex face count.");
```

Suggested fix

Add a boundary check after ReadInt following the convention in line 410 below. Line 410 ensures the number read by ReadInt does not exceed the size of the vector.

```
assimp/code/AssetLib/X/XFileParser.cpp
Lines 394 to 415 in 3c253ca
         unsigned int numVertices = ReadInt();
394
395
         pMesh->mPositions.resize(numVertices);
396
         // read vertices
397
398
         for (unsigned int a = 0; a < numVertices; a++)</pre>
             pMesh->mPositions[a] = ReadVector3();
399
400
         // read position faces
401
         unsigned int numPosFaces = ReadInt();
402
         pMesh->mPosFaces.resize(numPosFaces);
403
         for (unsigned int a = 0; a < numPosFaces; ++a) {</pre>
404
             // read indices
405
```

CVE-2022-38528 was published yesterday and references this bug report.
