Division by zero in TFLite's implementation of `SpaceToBatchNd`

Low mihaimaruseac published GHSA-v52p-hfjf-wg88 on May 12, 2021

Package tensorflow-lite (pip) Affected versions Patched versions < 2.5.0 2.1.4, 2.2.3, 2.3.3, 2.4.2

Description

Impact

The implementation of the $\,$ SpaceToBatchNd $\,$ TFLite operator is vulnerable to a division by zero error:

TF_LITE_ENSURE_EQ(context, final_dim_size % block_shape[dim], 0);
output_size->data[dim + 1] = final_dim_size / block_shape[dim];

An attacker can craft a model such that one dimension of the block input is 0. Hence, the corresponding value in block_shape is 0.

We have patched the issue in GitHub commit 6d36ba65577006affb272335b7c1abd829010708.

The fix will be included in TensorFlow 2.5.0. We will also cherrypick this commit on TensorFlow 2.4.2, TensorFlow 2.3.3, TensorFlow 2.2.3 and TensorFlow 2.1.4, as these are also affected and still in supported range.
