ONLINE HOTEL BOOKING SYSTEM 1.0 ROOM EDIT_ALL_ROOM.PHP ID SQL INJECTION

CVSS Meta Temp Score ?	Current Exploit Price (≈) ?	CTI Interest Score (?
4.5	\$0-\$5k	0.00

A vulnerability has been found in Online Hotel Booking System 1.0 (Hospitality Software) and classified as critical. Affected by this vulnerability is some unknown functionality of the file <code>edit_all_room.php</code> of the component <code>Room Handler</code>. The manipulation of the argument id with the input value <code>2828%27%20AND%20(SELECT%203766%20FROM%20(SELECT(SLEEP(5)))BmIK)%20AND%20%27YLP1%27=%27YLP1</code> leads to a sql injection vulnerability. The CWE definition for the vulnerability is CWE-89. The software constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. As an impact it is known to affect confidentiality, integrity, and availability.

The weakness was released 06/30/2022. The advisory is shared at github.com. This vulnerability is known as CVE-2022-2262. Technical details and also a public exploit are known. MITRE ATT&CK project uses the attack technique T1505 for this issue.

It is declared as proof-of-concept. It is possible to download the exploit at github.com. By approaching the search of inurl:edit_all_room.php it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
