1.代码分析

从铭飞官网https://gitee.com/mingSoft/MCMS把源码考下来之后

经过审计找到上传点, form.ftl这里有个文章缩略图上传点看他有没有做过滤然后根据action找到上传接口

经过查找在FileAction.class这里只判断了../防止目录跳跃,继续往下看点击继承的那个类

```
@controller
@RequestHapping({s="file"})
public class FileAction extends BaseFileAction {
    public FileAction() {}

@{...}

public FileAction() {}

@{...}

public ResultData upload(@Apilgnore Bean bean, HttpServletRequest req, HttpServletResponse res) throws IDException |
    boolean uploadEmable = MSProperties.upload.emableMeb;
    if (uploadEmable) {
        return ResultData.build().error(this.getResString(\syn "insufficient.permissions"));
    } else if (bean.getUploadPath() = nult || 'bean.getUploadPath().contains("...\") && |bean.getUploadPath().contains("...\")) {
        if (bean.isAppld()) {
            bean.isAppld() {
                  bean.isAppld() }
        }

        Config config = new Config(bean.getUploadPath(), bean.getFile(), (String)null, uploadFoderDath folse, bean.isRename());
        return this.upload(config);
    } else {
        return ResultData.build().error(this.getResString(\syn "err.error", new String[]{this.getResString(\syn "file.path")}));
    }
}
```

BaseFileAction.class发现他这做了后缀判断接着看是在哪调用的过滤

我们复制denied全局搜索, application.yml发现他是在配置文件里写了过滤, 过滤了 exe,jsp,jspx,sh那说明除了这四个其他都可以上传

接着看看他有没有可利用的接口来实现上传jsp,经过查找TemplateAction.class里有个专门解析zip的接口。那么结合上面的过滤可以上传zip,可以通过zip包含jsp恶意文件上传上去然后调用这个接口去解析zip并解析树

jsp并访问。

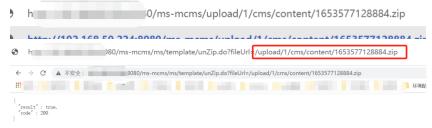

2.根据分析的代码操作

找到文章缩略图地址,点击上传zip

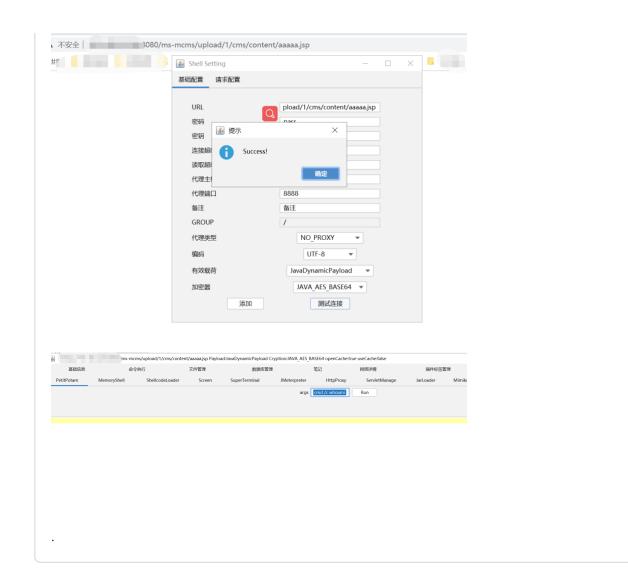

上传上去之后右键复制图片路径,然后通过上面分析的调用解析zip的接口fileUrl=刚刚上传的zip回车提示执行成功

之后查看上传目录的地方,发现成功解压了在通过路径访问aaaaa.jsp,然后利用哥斯拉去连接他发现执行成功

IMBALaunched commented on Jul 4

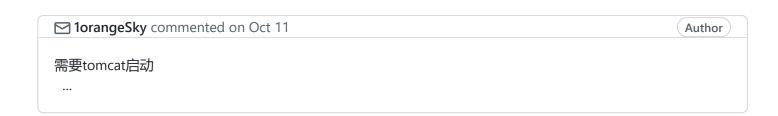

您是如何配置环境的,我用idea搭建环境后,存放上传文件的目录下不对jsp文件进行解析
