This is definitely a different error, you're right. Will have a look.

💬 • **Pchelolo** added a comment. 2021-05-11 16:29:26 (UTC+0)   ▼

Okey. The problem is pretty clear.

Now that we are ably to correctly insert cross-wiki block with a correct blocker, CheckUser is doing auto blocking of IPs that are associated with the block. But CheckUser is oblivious towards which wiki the block actually belongs to, so it does everything in the context of metawiki.

BTW, none of these errors are regressions. They just indicate before some of these blocks were inserted with invalid blockers..

I guess the best fix is to actually make blocks wiki-aware and support cross-wiki blocking properly. How urgent is this?

💬 **Urbanecm** added a comment. 2021-05-15 13:17:02 (UTC+0)

Let me try to summarize where are we at right now:

- CentralAuth-issued suppresions don't work, because making xwiki autoblocks is not possible. The proper solution for that would be T274817: Convert DatabaseBlock and AbstractBlock to UserIdentity, and make them cross-wiki aware: , which is something the platform team would likely work at one point.
- Simple workaround would be to disable autoblocks. Stewards do not autoblocks to work for locks, because there is currently no such mechanism. In case we need an autoblock-like mechanism, we manually checkuser the user and block the IP manually. So, let's do that for now, and let T274817 be the proper solution. I'll upload a patch momentarily.

🗔 **Jdforrester-WMF** moved this task from **Blocker** to **Not a blocker** on the ~~MW-1.36-release~~ board. 2021-05-20 17:39:07 (UTC+0)

🔗 **Tks4Fish** added a project: **Stewards-and-global-tools**. 2021-06-02 17:57:53 (UTC+0)

Is there any plan to review this patch? If an user doxxes someone on the username, or creates an account with a phone number, there is no way to hide that. This is a big security issue that has a patch pending review for 15 days. I understand we are all volunteers, but it'd be really good for this to be reviewed.

💬 • **Pchelolo** added a comment. 2021-06-02 18:00:00 (UTC+0)

@Urbanecm +2 for the patch.

💬 **Urbanecm** added a comment. 2021-06-02 18:15:33 (UTC+0)

> @sbassett Hi, would you mind doing the final honors (backports here; should need only master)? Thanks!

Sure, tracking at T276237 and T279733 for now. This will definitely get backported before the end of this quarter (2021-06-30) but I can't guarantee when, unless someone else wants to run with it. Though I'd question if we even want this on master since it's kind of a Wikimedia production-specific config change if I'm reading this bug and the patch comment correctly.

The error would be very likely present on any Wikimedia-like wikifarm. The underlying bug is in MediaWiki core (which doesn't support xwiki blocks [an user from wiki A blocks on wiki B] properly, and while xwiki blocks work somehow, autoblocks sometimes fail with this error message, which is why this task exists]). Fixing that bug properly would be possible, but the platform team asked for time to refactor blocks to support xwiki blocks in the proper way, rather than adding hacks at top of hacks.

You're right that the bug very likely apprears only in Wikimedia production, but that's not because we have a special configuration – it is because non-Wikimedia wikis shouldn't use centralauth because of its complexity (and in parts, Wikimedia-specificness), see the big red warning at https://www.mediawiki.org/wiki/Extension:CentralAuth.

I personally vote for including into master (as that'd avoid conflicts as master progresses), but I defer to your judgement.

Ok, that all makes sense, thanks. We can plan to backport this to master.

💬 **Zabe** added a comment. Edited · 2022-04-03 22:24:54 (UTC+0) ▼

"Fun" fact: The second part of this was actually predicted almost a year before it showed up.

From the task description of T258866 :

> *CentralAuthUser::doLocalSuppression is an example that passes the database to insert:*
> *The block is always autoblocking (presumably the autoblocks are not being inserted correctly?)*
