How to fix?

There is no fixed version for `html-to-csv`.

> NVD   9.8 CRITICAL
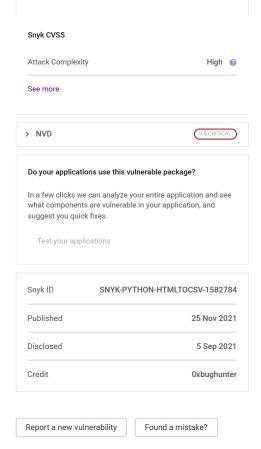

Overview

html-to-csv is an utility that extracts tables from HTML documents and converts them to CSV format

Affected versions of this package are vulnerable to Improper Input Validation. When there is a formula embedded in a HTML page, it gets accepted without any validation and the same would be pushed while converting it into a CSV file. Through this a malicious actor can embed or generate a malicious link or execute commands via CSV files.

Do your applications use this vulnerable package?

In a few clicks we can analyze your entire application and see what components are vulnerable in your application, and suggest you quick fixes.
